

APPLICATIONS AND SERVICE ENGINEER

1 The Company

Radix Systems Limited is small, dynamic company specialising in the design and manufacture of high-speed electronic visual inspection machines for the food industry. The company has been successful over its twenty-year history, and has recently introduced innovative new products that are being recognised as the best in their field. We are operating from three industrial units on the eastern outskirts of Romsey, with the M27 only a few minutes away. Radix currently employs twelve people, the majority of whom have professional status. Radix is an equal opportunities employer.

2 The Job

The scope of the job is wide-ranging and includes many more activities than the title would suggest. The main tasks are listed below.

- Application development (new food product types on existing machine designs), adaptation and testing of sophisticated opto-electronic machines
- Preparation of these machines for in-house or customer site trials
- Commissioning of systems, both in the UK and overseas
- Servicing of systems on customers' premises
- Assistance in R&D activities
- Assisting during exhibitions and demonstrations

The work is predominantly based in our offices, but intensive periods of international travel will be required.

Pressures to meet deadlines are common; the meeting of high established standards and the use of own initiative are the norm.

3 The Candidate

It is expected that the candidate will be educated to a good standard in electronics or other engineering discipline, have good overall technical aptitude and be able to cope with mechanical as well as electrical and electronic problems. A food industry background would be useful but not essential.

The candidate should be able to learn new concepts quickly, be self-motivated and able to communicate well, both verbally and in writing. It is expected that the candidate will have at least two years industry experience and proven ability to solve problems in the field. The ability to use computers and standard IT, mechanical and electronic tools is essential. Fluency in an additional major European language is an advantage. A clean driving license is a requirement.

4 The Rewards

- An opportunity to join a successful company where your own contribution is visible and recognised.
- A basic salary in the range of £22,000 to £27,000 per annum with performance bonus on specific tasks.
- The satisfaction of working on the edge of technology, real-live machines containing many cross-discipline elements.
- Opportunity to progress into R&D or Project Management role.
- Twenty-four days of annual leave, private medical insurance, travel insurance, and private contributory company pension are included.
- UK and overseas travel.
